Talking points

The project uses session-protected login and role-based admin access.

It reframes lie detection into a behavioral response analysis problem with measurable features.

Difficulty levels and adaptive follow-up prompts make the main module more dynamic and research-oriented.

Lower mood stability appears to coincide with weaker authenticity scores.

Higher productivity days are associated with more confident response behavior.

Review frequently flagged categories in the risk heatmap to identify repeat triggers.

Mood and authenticity are moving together; track both modules on the same day for clearer interpretation.

Compare selected sessions

Session log

■ Response Authenticity

4/25/2023, 7:53:01 AM

Responses showed strong authenticity signals. Hesitation was high, especially on reflective prompts. Answer patterns remained consistent across categories.

Score 94% Confidence 85% Hesitation 100% Consistency 100% Difficulty High-pressure

Could you repeat a sensitive story now without changing any detail?: High delay before answer

Do you deny things quickly when they put pressure on you?: Stable response pattern

Have you hidden a fact to avoid blame even when asked directly?: Stable response pattern

■ Mood Mapping

4/24/2023, 4:22:36 PM

Emotionally strained. The emotional pattern suggests heightened strain across multiple prompts.

Score 38% Confidence 64% Hesitation 43% Consistency 100% Difficulty self-report

How do you feel before answering personal questions?: stressed selected

■ Response Authenticity

4/24/2023, 9:34:12 AM

Responses showed strong authenticity signals. Hesitation was high, especially on reflective prompts. Answer patterns remained consistent across categories.

Score 88% Confidence 85% Hesitation 75% Consistency 100% Difficulty standard

Do you remain consistent when retelling the same event twice?: High delay before answer

■ Response Authenticity

4/24/2023, 9:19:07 AM

Responses were moderately reliable with visible friction. Hesitation was high, especially on reflective prompts. Answer patterns remained consistent across categories.

Score 67% Confidence 80% Hesitation 100% Consistency 97% Difficulty standard

Have you ever hidden a fact to avoid consequences?: High delay before answer

Have you ever changed a story to protect your image?: Quick denial pattern

Do you remain consistent when retelling the same event twice?: High delay before answer

Do you usually speak honestly even when the truth feels uncomfortable?: Stable response pattern

■ Productivity Signals

4/24/2023, 9:03:15 AM

Strong output with healthy focus and energy.

Score 90% Confidence 100% Hesitation 0% Consistency 87% Difficulty daily-log

■ Mood Mapping

4/24/2023, 9:02:49 AM

Positive and stable. The emotional pattern suggests mostly manageable emotional load.

Score 88% Confidence 99% Hesitation 3% Consistency 100% Difficulty self-report

■ Response Authenticity

4/24/2023, 9:01:01 AM

Responses were moderately reliable with visible friction. Hesitation was high, especially on reflective prompts. Answer patterns remained consistent across categories.

Score 70% Confidence 72% Hesitation 100% Consistency 86% Difficulty standard

Do you usually speak honestly even when the truth feels uncomfortable?: High delay before answer

Follow-up: Can you explain "personal integrity" responses with the same certainty right now?: Quick denial pattern

Do you remain consistent when retelling the same event twice?: Quick denial pattern

Do direct personal questions make you hesitate before answering?: High delay before answer

■ Response Authenticity

4/24/2023, 4:02:54 AM

Responses were moderately reliable with some tension markers. Hesitation was high, especially on reflective questions. Answer patterns remained consistent across categories.

Score 66% Confidence 76% Hesitation 100% Consistency 92% Difficulty standard

Do you remain consistent when retelling the same event twice?: High delay before answer

Can you describe important life events without uncertainty?: High delay before answer

Would a close friend describe you as transparent and direct?: Stable response pattern

Do you usually speak honestly even when the truth feels uncomfortable?: High delay before answer

Do direct personal questions make you hesitate before answering?: High delay before answer

Have you ever exaggerated success to impress someone?: Quick denial pattern

Do you avoid certain topics because they expose uncomfortable truths?: High delay before answer

Have you ever changed a story to protect your image?: High delay before answer

Explainable scoring

Total analysis time: 30 seconds

Difficulty: High-pressure

Formula: 100 - time penalty - change penalty - lower penalty - pattern penalty + consistency bonus

Response showed strong authenticity signals. Hesitation was high, especially on reflective prompts. Answer patterns remained consistent across categories.

Breakdown

Time penalty: 18%

Change penalty: 0%

Lower penalty: 18%

Pattern penalty: 0%

Consistency bonus: 30%

Flagged prompts

memory recall: High delay before answer

stress response: Stable response pattern

personal integrity: Stable response patterns

Category risk

memory recall - risk 61% | avg time 5.7s

personal integrity - risk 54% | avg time 3s

stress response - risk 54% | avg time 1.9s

social pressure - risk 32% | avg time 1.6s

Recommendations

Repeat the session under lower pressure conditions to compare hesitation shift.

Review memory-recall prompts; they appear to trigger the highest uncertainty.
